- Biology
- Maths
- Physics
- Chemistry
- Maps

To promote human and intellectual diversity by providing equal access and equal opportunity through fostering an inclusive environment for all individual with disabilities

# TACTILE GRAPHICS

## What is braille?

Braille is a code used by people who are blind or visually impaired to read and write. It is a tactile system through which letters and words are represented using raised dots, and it is not a separate language. In fact, there are different braille codes for different languages. Unified English Braille is a code used by English-speaking people throughout the world.

Braille uses sets of six dots, called cells, in various combinations to represent letters of the alphabet, punctuation, numbers, and whole words.

- ◉ Unified English Braille (UEB)
- ◉ Literary Braille
- ◉ Nemeth Code (for science and math notation)
- ◉ Music Braille
- ◉ Foreign Languages

# GRAPHIC DESIGN

# Providing Full Range Design & Integration Services

We leverage your business by integrating applications to simplify the complexities of operational overheads

We develop scalable end-to-end cross-platform solutions for delivering exceptional experience.

- PHP
- .Net
- Angular JS
- Android Application
- HTML5

# MOB/WEB DEVELOPMENT

## Language Expertise

the Tactile India graphic designers, technology specialists, and linguists work together to ensure that the unique typesetting requirements of each language are met.

In short, Tactile India typesetters can work within your layout to accommodate text expansion and contraction, while respecting vital grammatical nuances, making it look as if your file were originally typeset in the target languages.

With expertise in all applications, our typesetters draw upon our library of fonts in more than 100 languages including Japanese, Russian, Arabic, and Vietnamese. We can typeset complex files in MAC or PC platforms and deliver the kind of electronic files you prefer.

# MULTILINGUAL TYPESETTING
